

- Improving effectiveness
- Revolutionizing outcomes
- Augmenting the standard of care

Oberon Sciences' system improves adherence

The digital system by Oberon Sciences **improves outcomes. Increases effectiveness** and overcomes drug tolerance.

- Low engagement and lack of trust of patients and providers in digital systems that assist in diagnosis data analysis.
- Health systems can not afford extra costs for “*nice to have*” systems.

Chronic medications lose their effect over time

US chronic disease market is valued at > 3 trillion USD/year

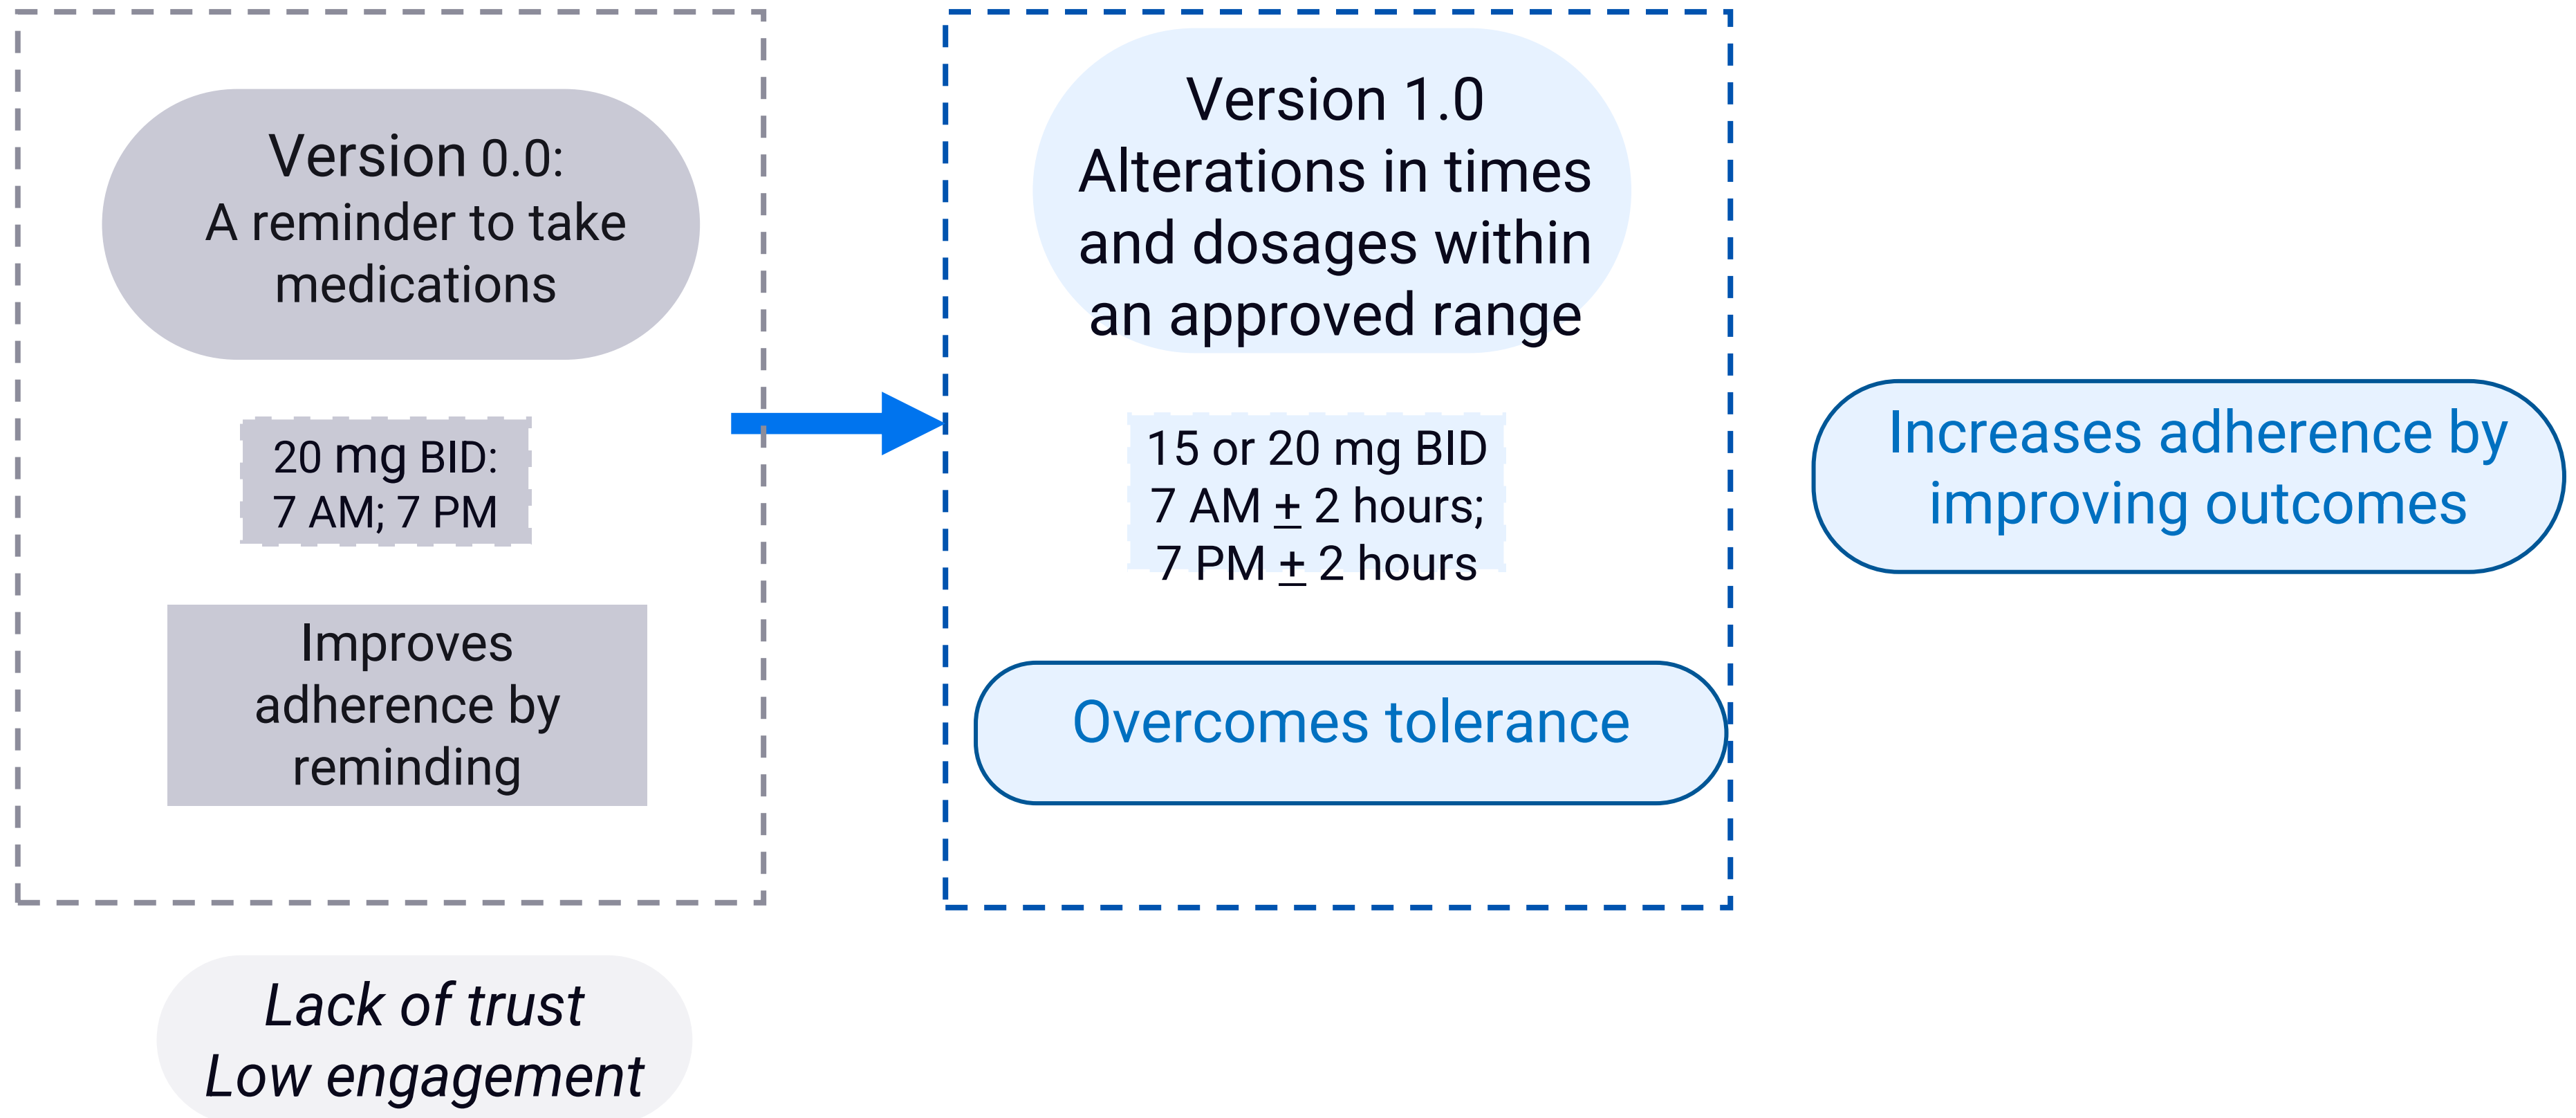

- 30-50% of patients lose the response to therapies.
- > 40% of patients do not adhere to their drugs.
 - increased admissions, use of expensive drugs.
 - significant loss to pharma companies.

55% of people > 60 suffer from ≥ 1 chronic diseases

- A third of patients with heart failure are resistant to diuretics.
- 30-40% of patients with epilepsy or depression resist **all drugs**.
- Drug-resistant cancer leads to **mortality**.
- Resistant to opioids mandate increasing dosages leading to **mortality**.
- 40% of patients receiving Humira, the blockbuster drug for arthritis and colitis, develop resistance.

The Digital Pill: A drug regulated by artificial intelligence

Optimizing the standard of care, improving adherence

Improving the response to diuretics in patients with heart failure and diuretic resistance

Reduces diuretic dosages

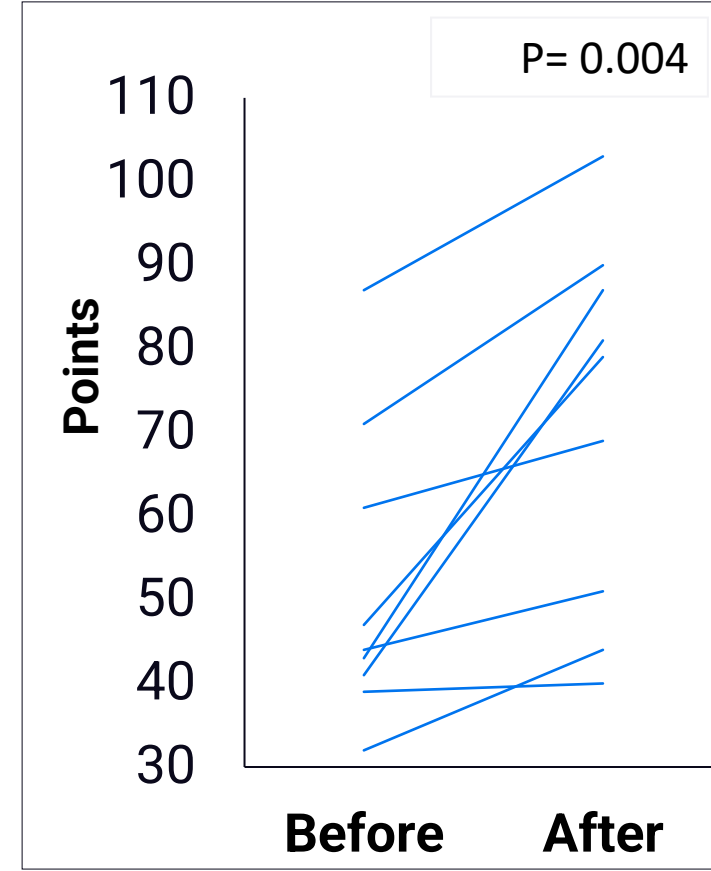

Improves kidney function

Serum Creatinine

Improves functional capacity

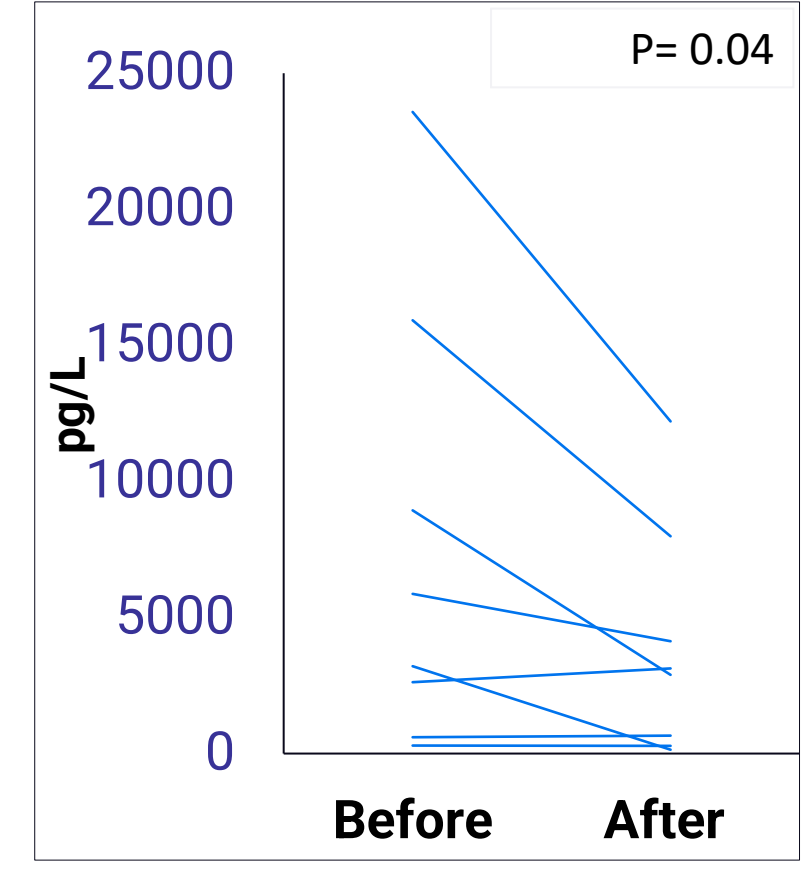

Kansas City Cardiomyopathy Questionnaire

Improves 6-minute walk test

Reduces NT-ProBNP serum levels

A measure of severity of heart failure

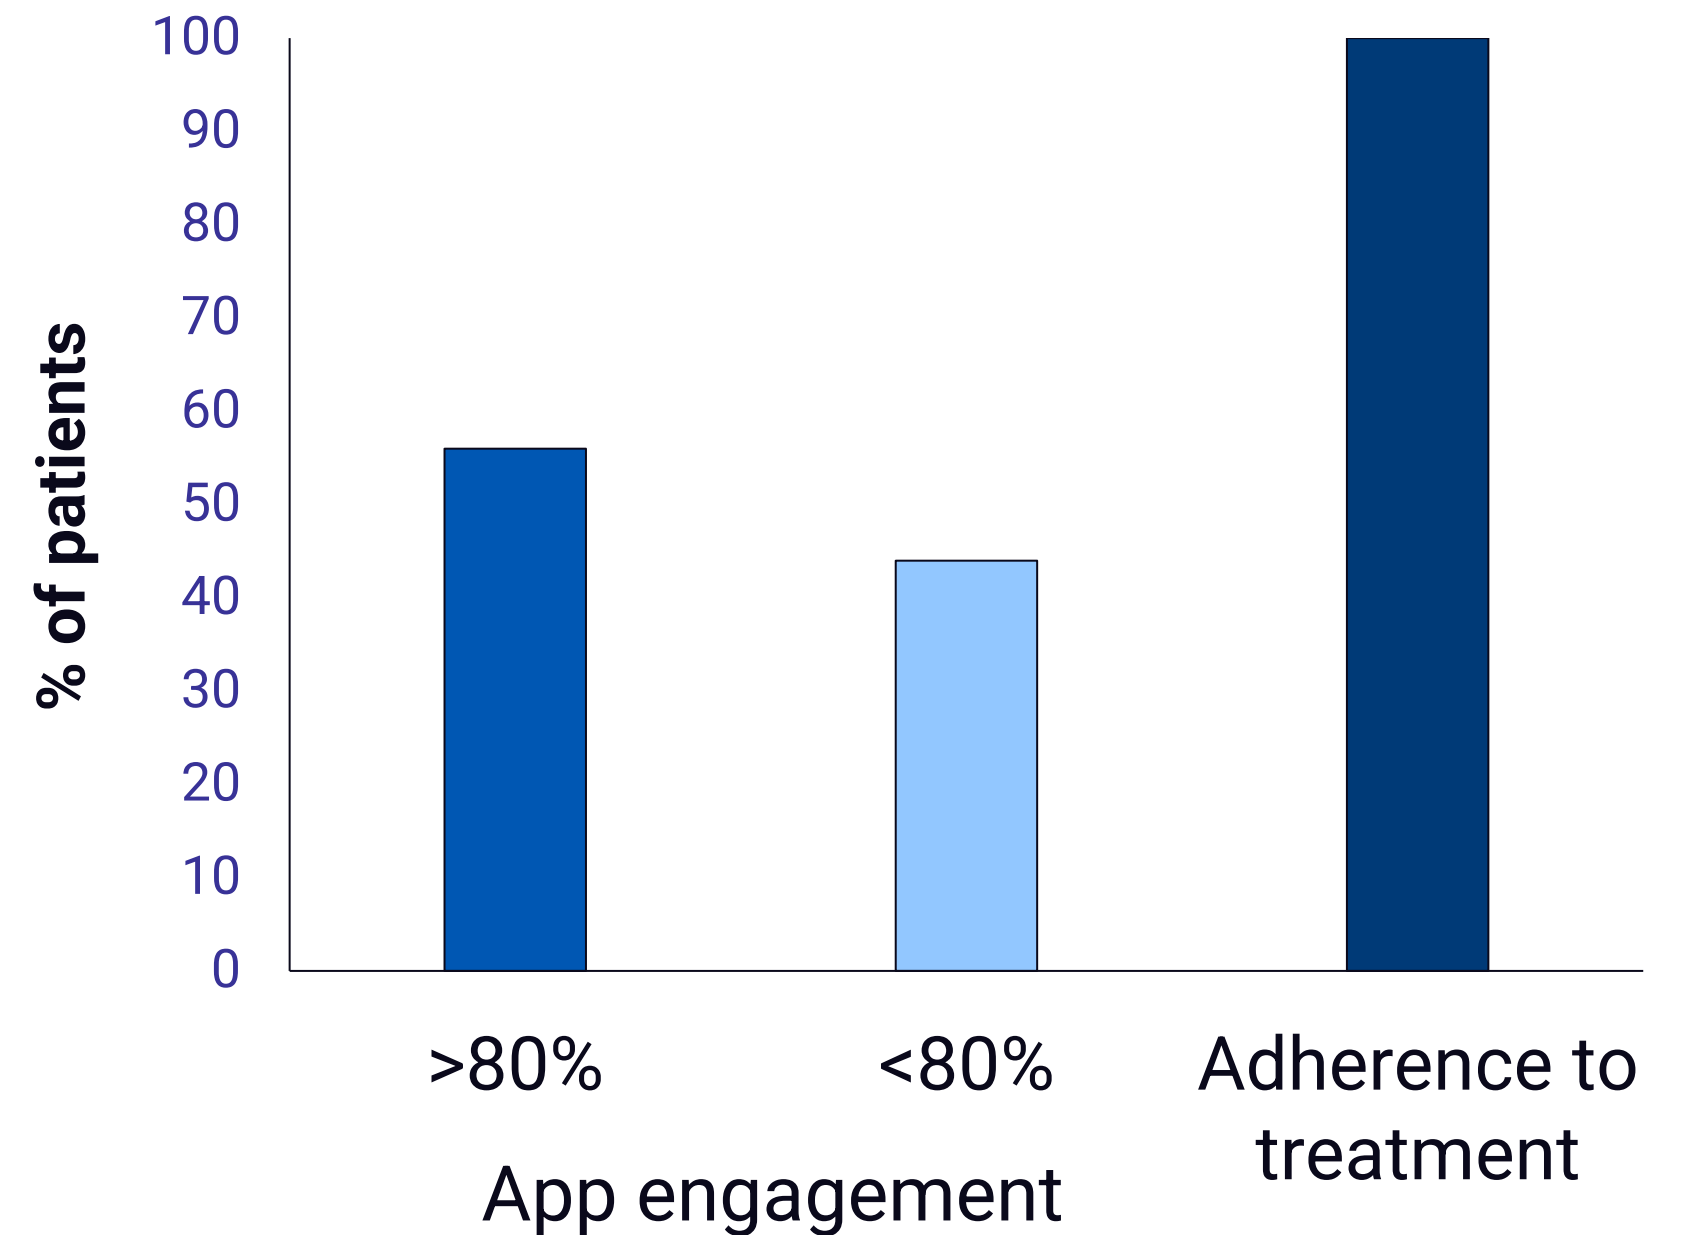

Improving the response to diuretics in heart failure

Reduces hospitalizations and emergency room admissions

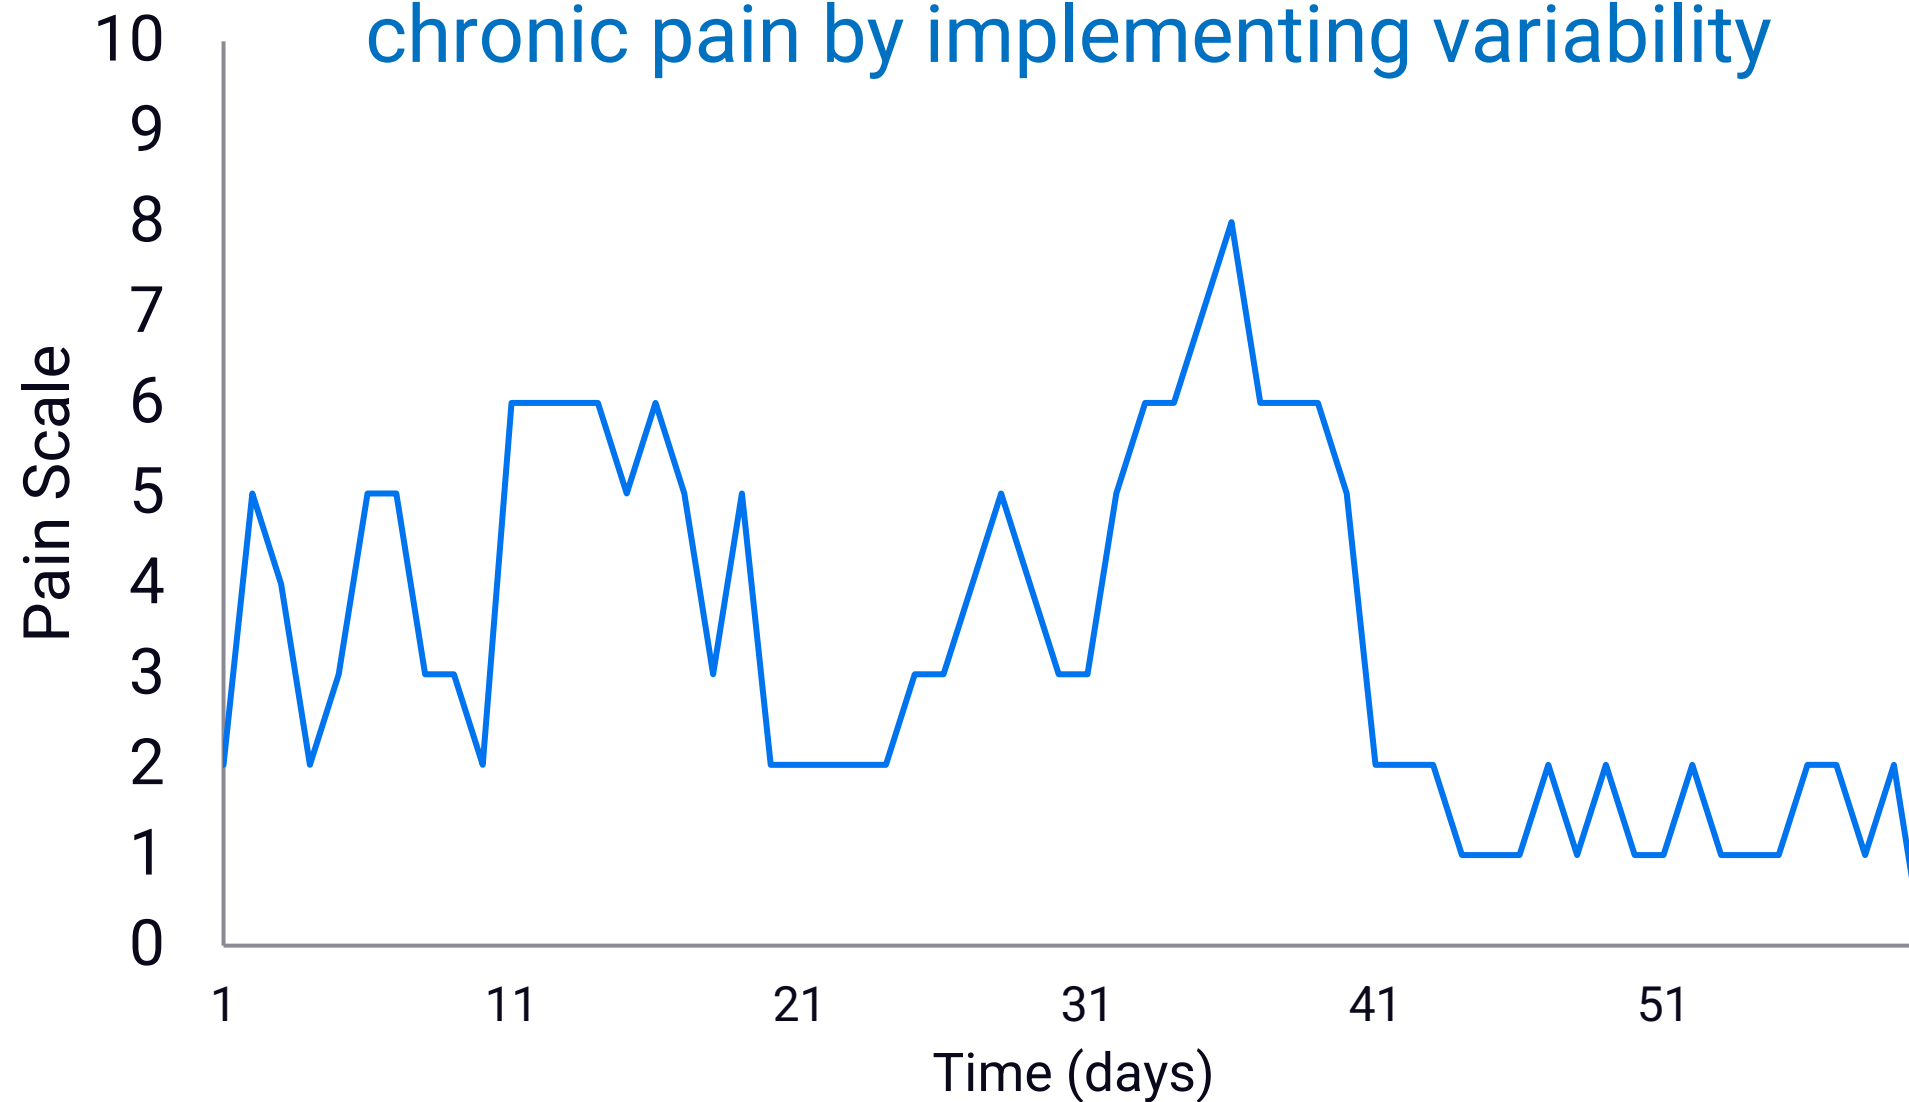

Improves engagement and adherence

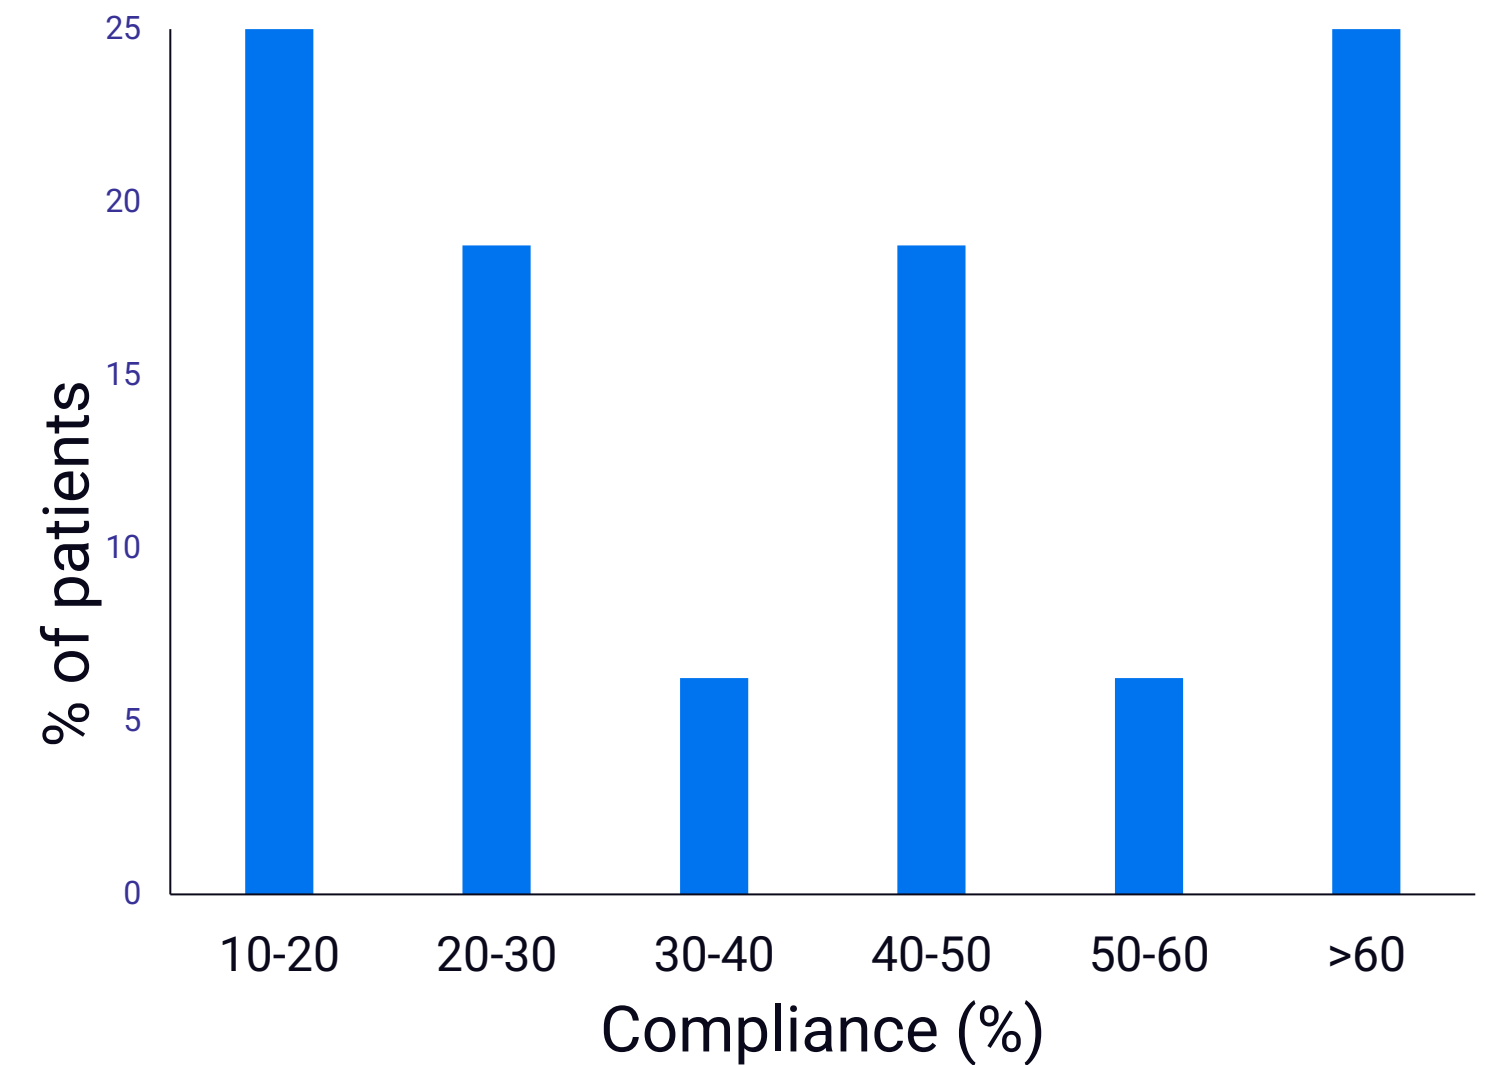

Overcoming the tolerance to analgesics

Digital Medical Cannabis real-world data

Improving the pain score in patients with chronic pain by implementing variability

High engagement rate

n=27

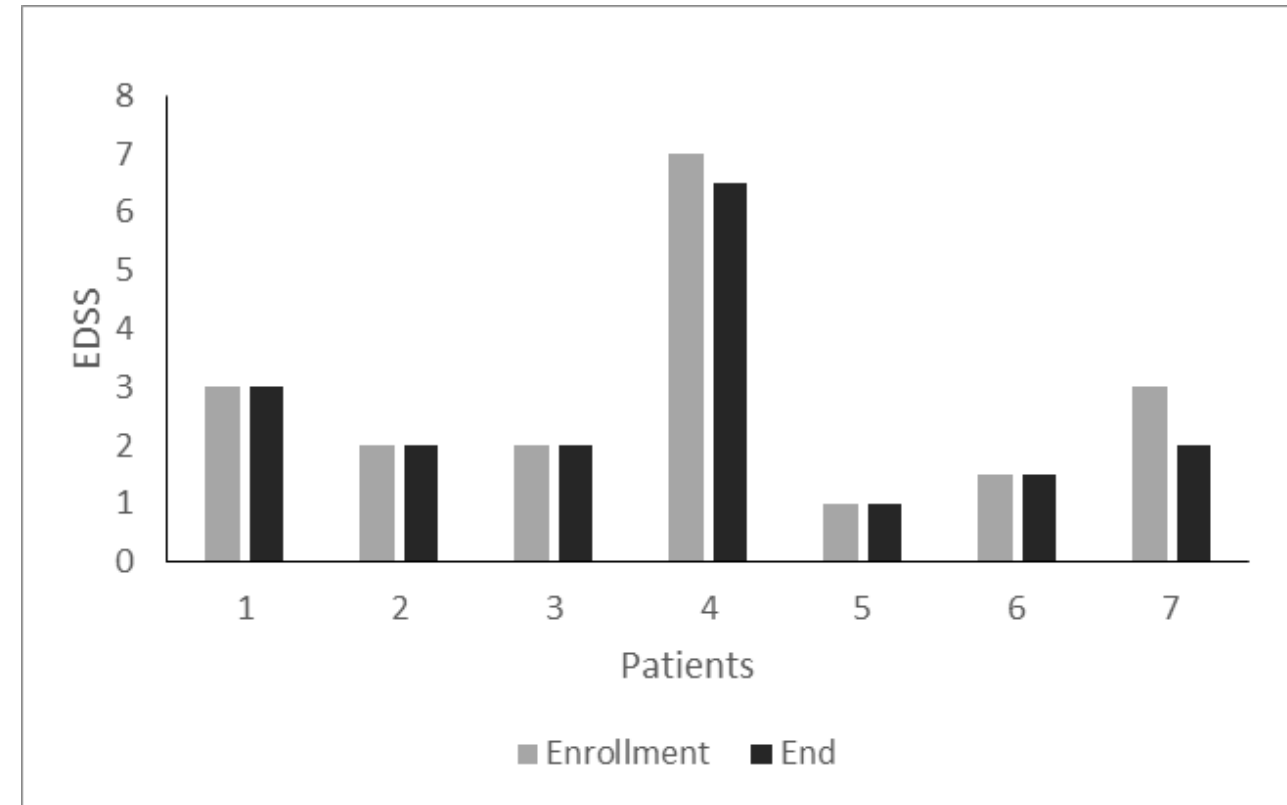

Use of app/day

Stabilization and improvement of the clinical status of multiple sclerosis patients treated with Dimethyl Fumarate (Tacfidera)

Real life Story

Good morning Dr. Lehmann
I feel great.

We are on vacation in the Dolomites, and I am proud to share that yesterday, I climbed after I already thought I wouldn't climb anymore (fear of stability and balance due to sclerosis). I did it successfully and, most importantly: with pleasure.

Add value to all players of the health care system: Ensuring engagement and saving costs

Patients

- Improve outcome
- Reduce admissions and hospitalizations

Physicians

- Improve adherence

Payers

- Saves costs

Pharma

- Market disruptor
- Increase revenues

- Seven worldwide issued patents
- In the market
- A short time to market
- FDA exempt “no claim”-based reminder within common practice

The Digital Pill increases effectiveness by introducing data-driven personalized regimens

Version 1.0

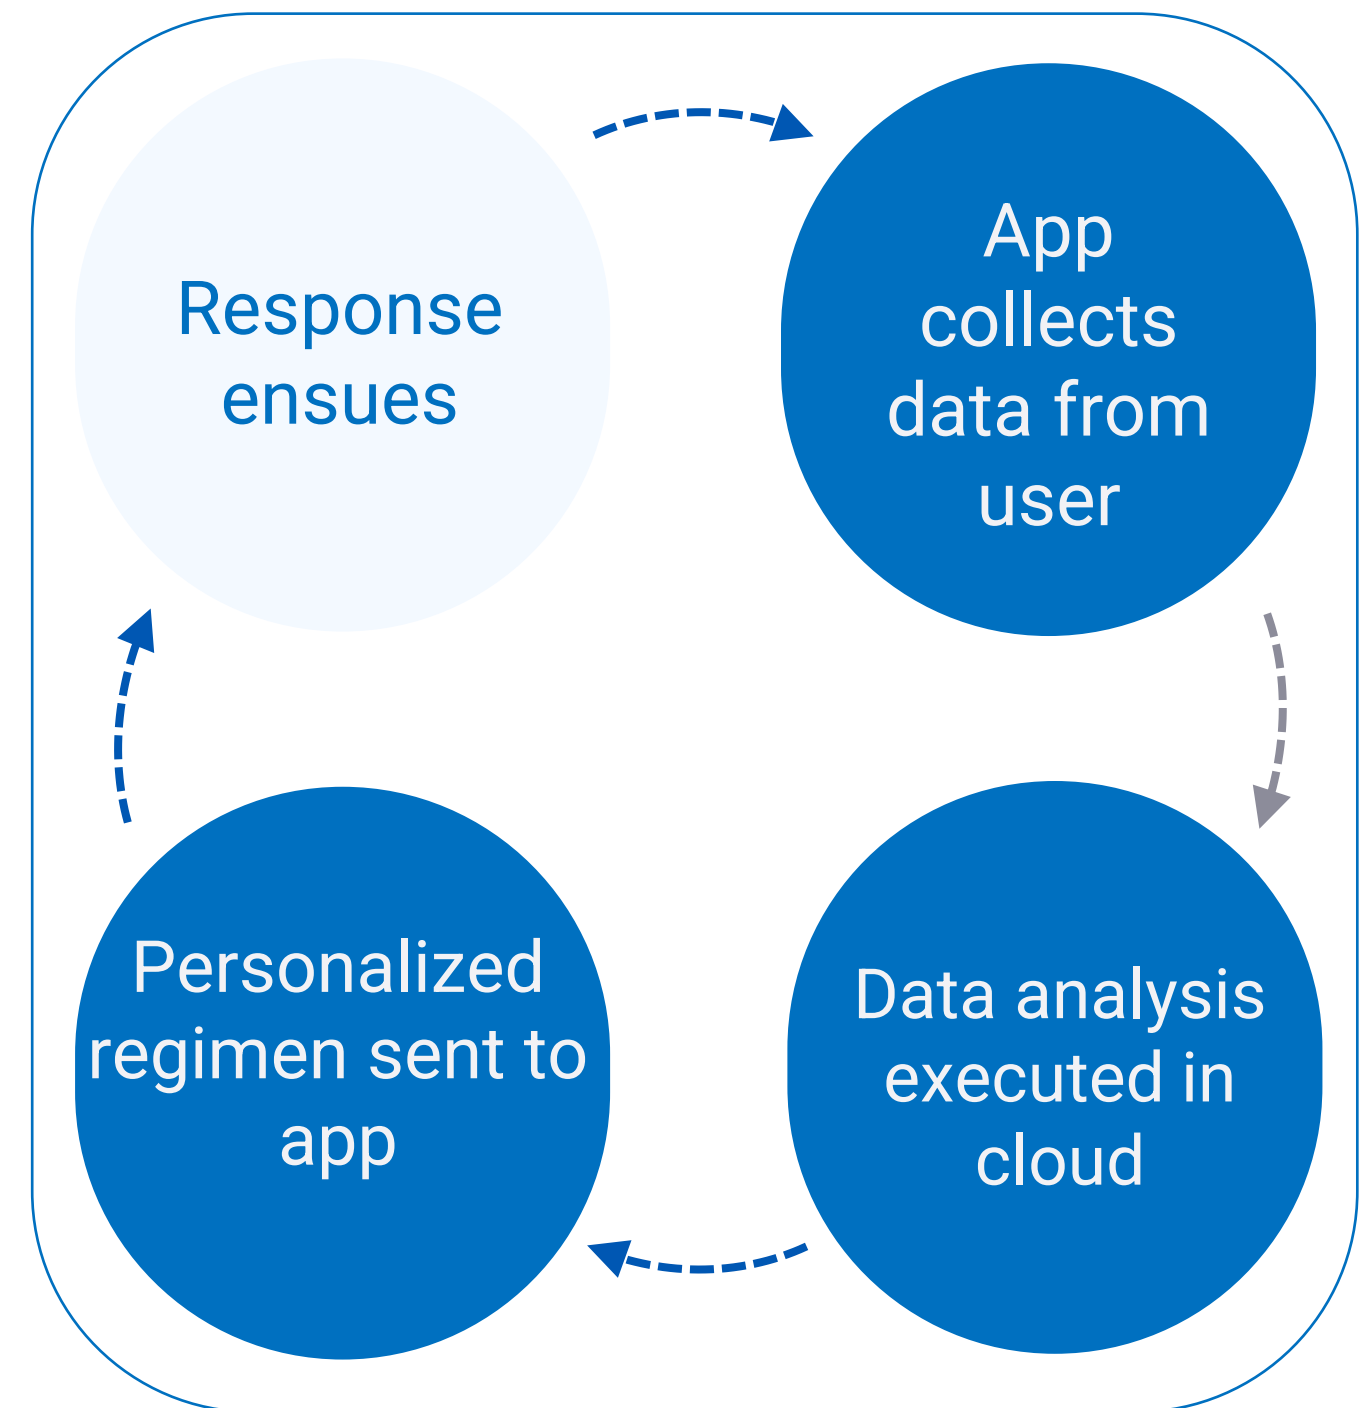

Introduces variability in dosing and times of administration within the approved range

Version 2.0

A closed-loop system that alters variability based on outcome

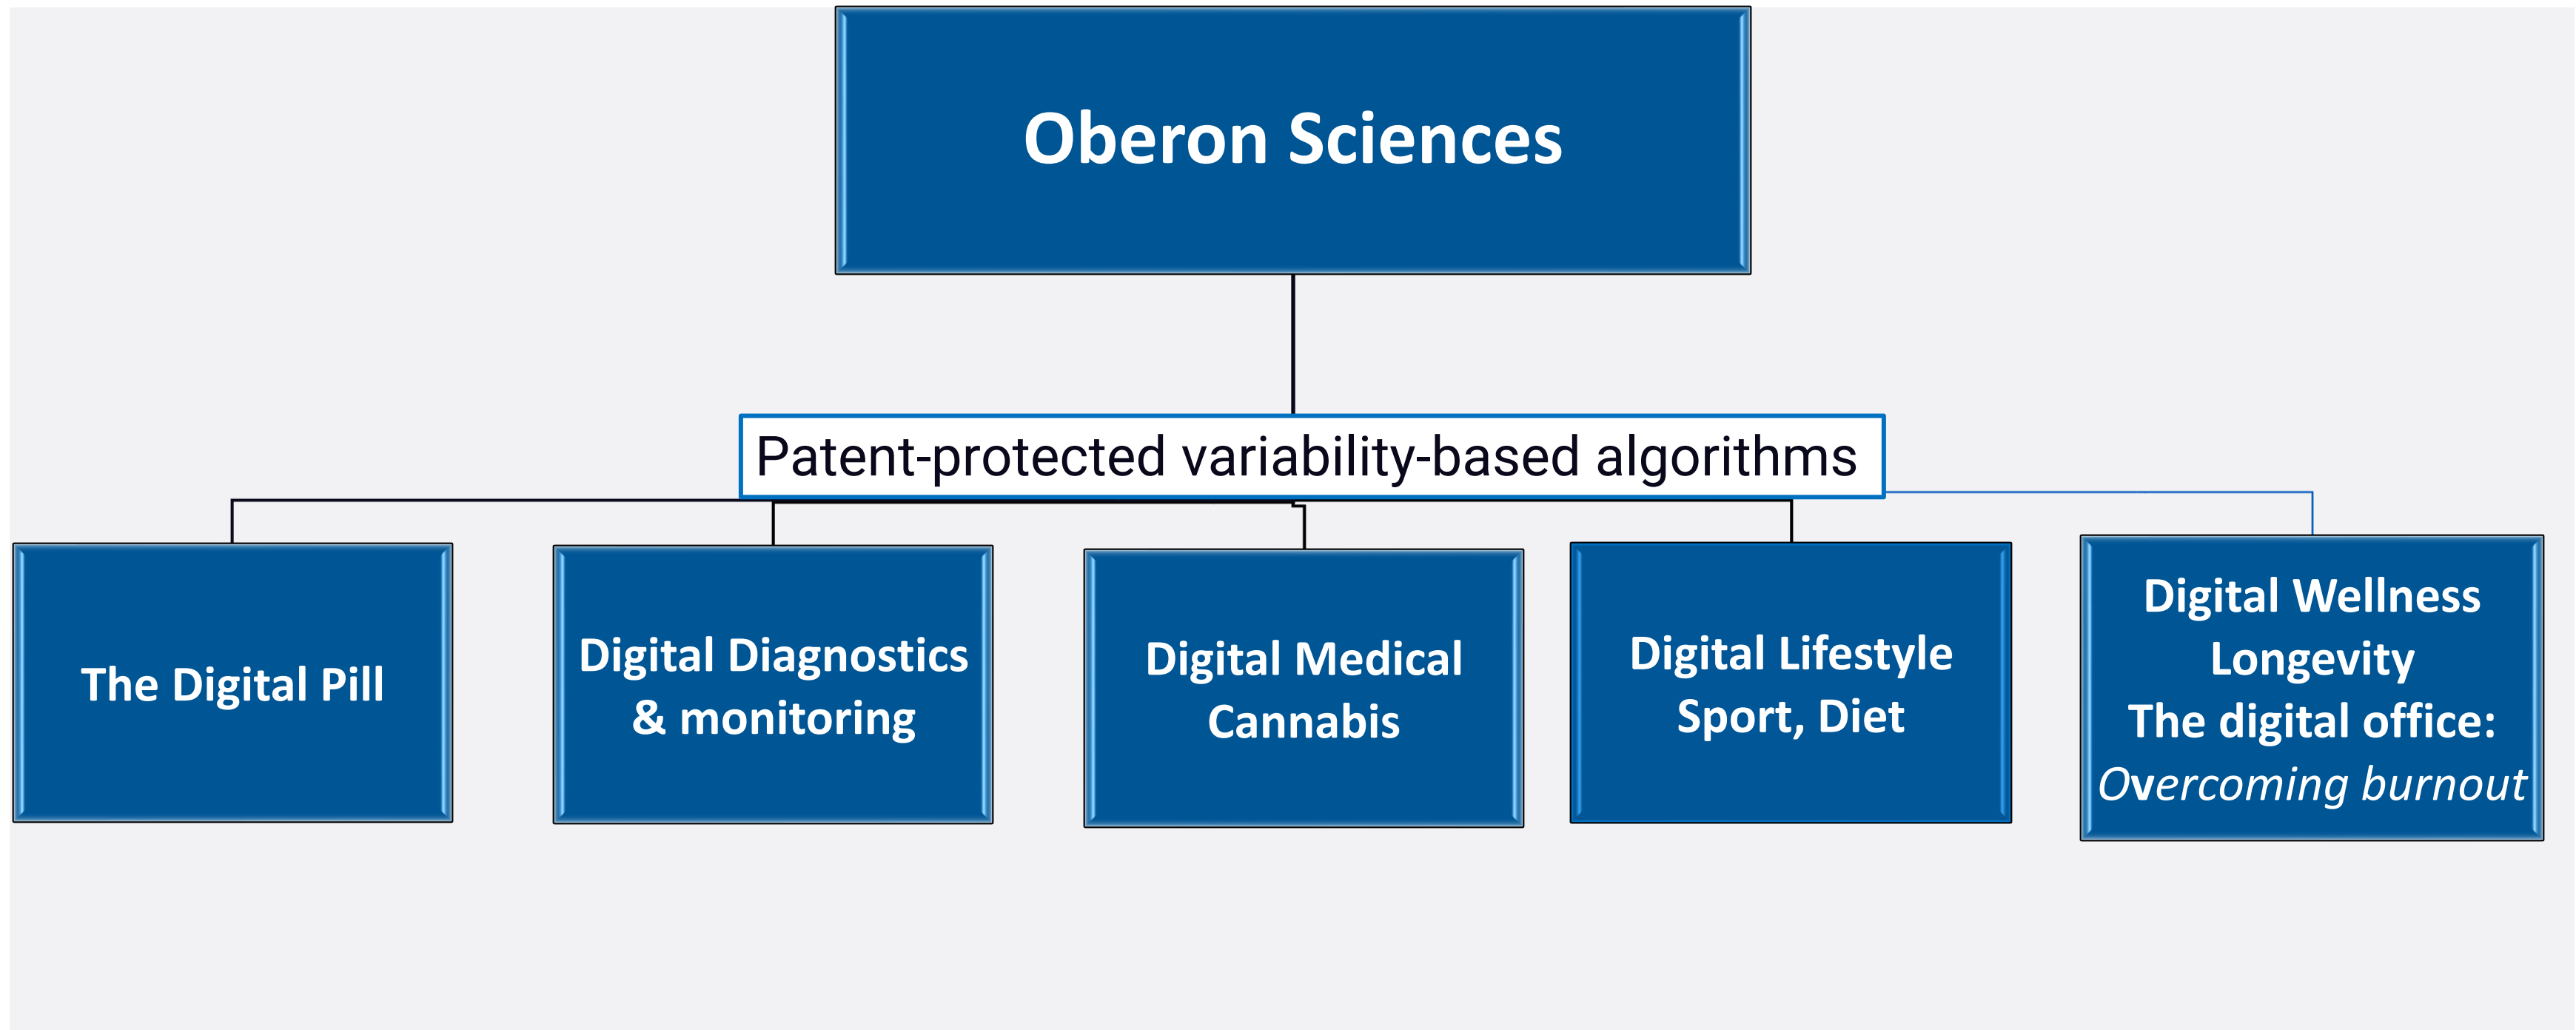

Version 3.0

Quantifying variability signatures and incorporating them into the algorithm

Oberon Sciences

Improving effectiveness & function by second-generation artificial intelligence

The Science

Noise is essential for the proper function of biological systems

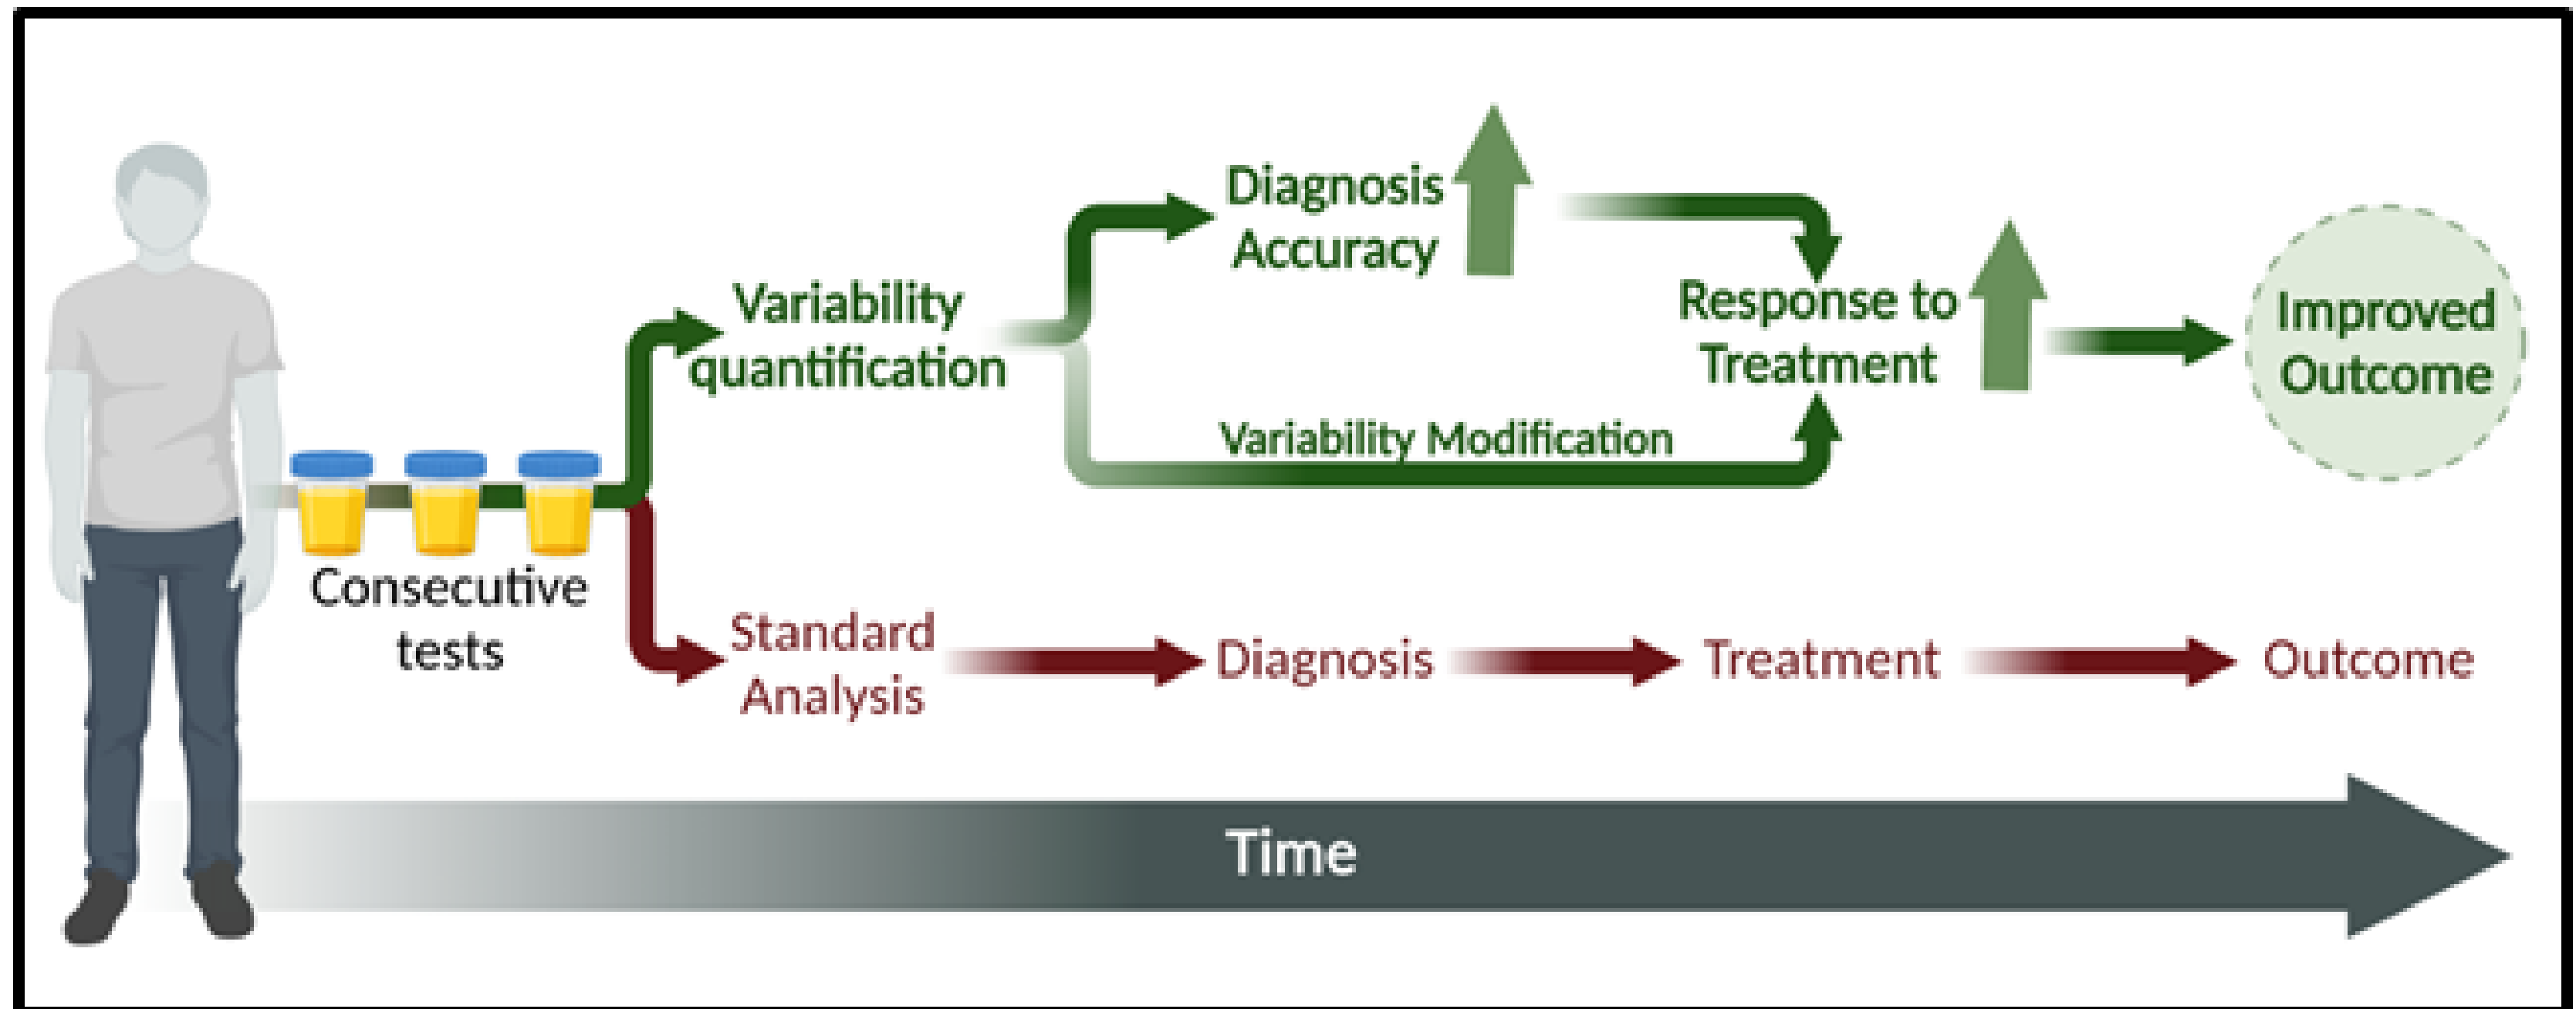

Variability is mandatory for the proper function of genes and proteins

- Heart rate variability (HRV): a beat-to-beat variation in heart
- Loss of variability is associated with a poor prognosis and increased mortality

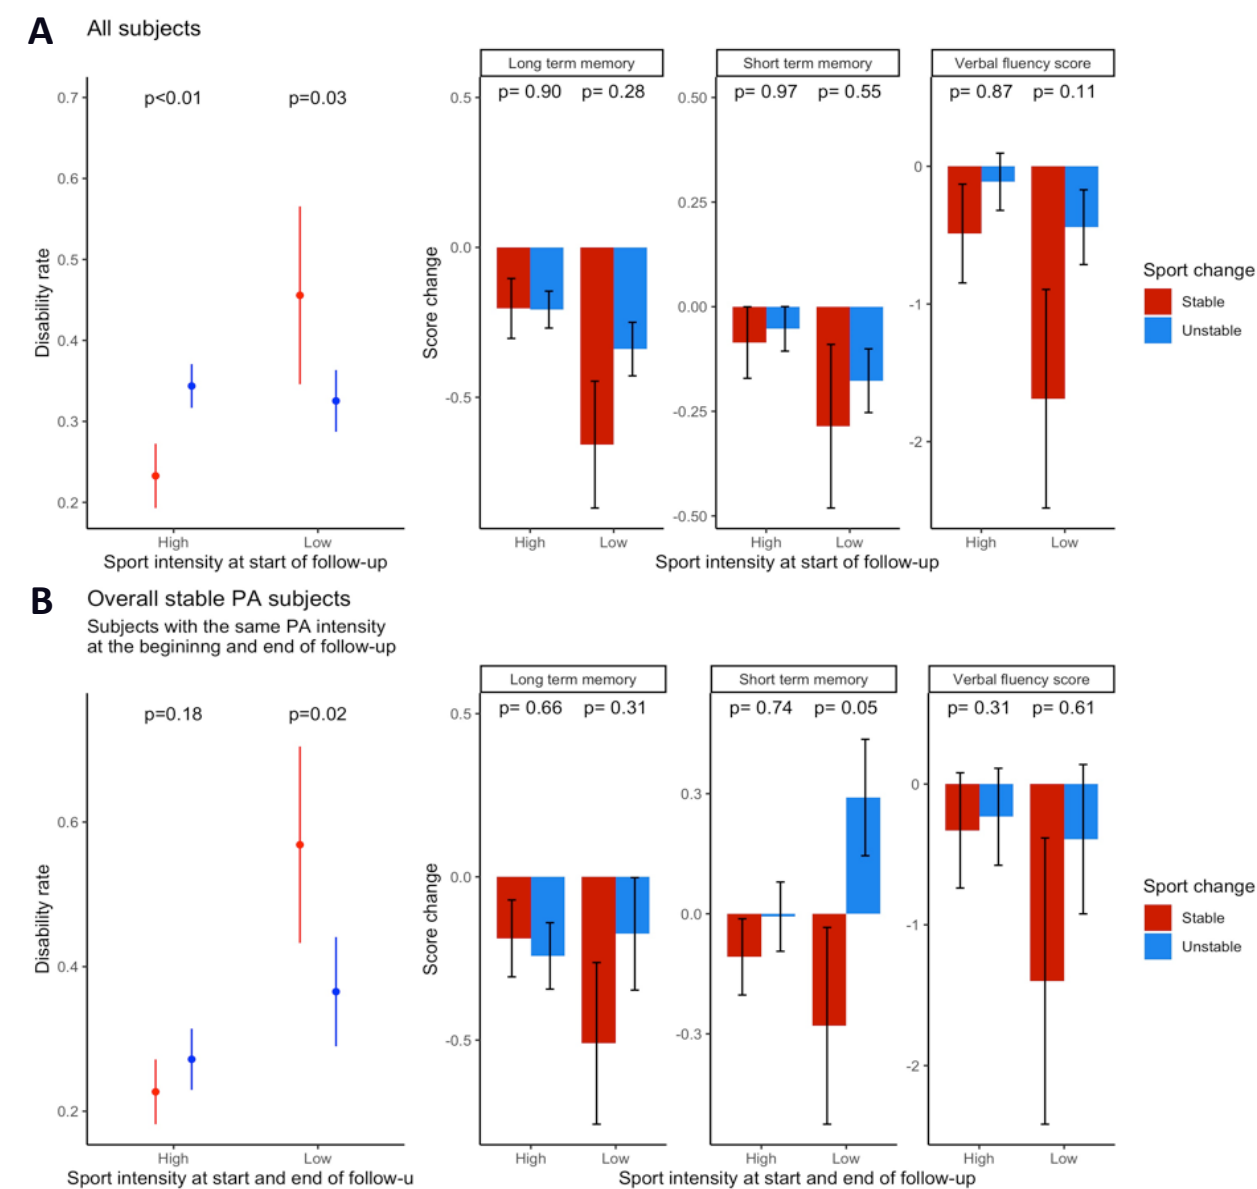

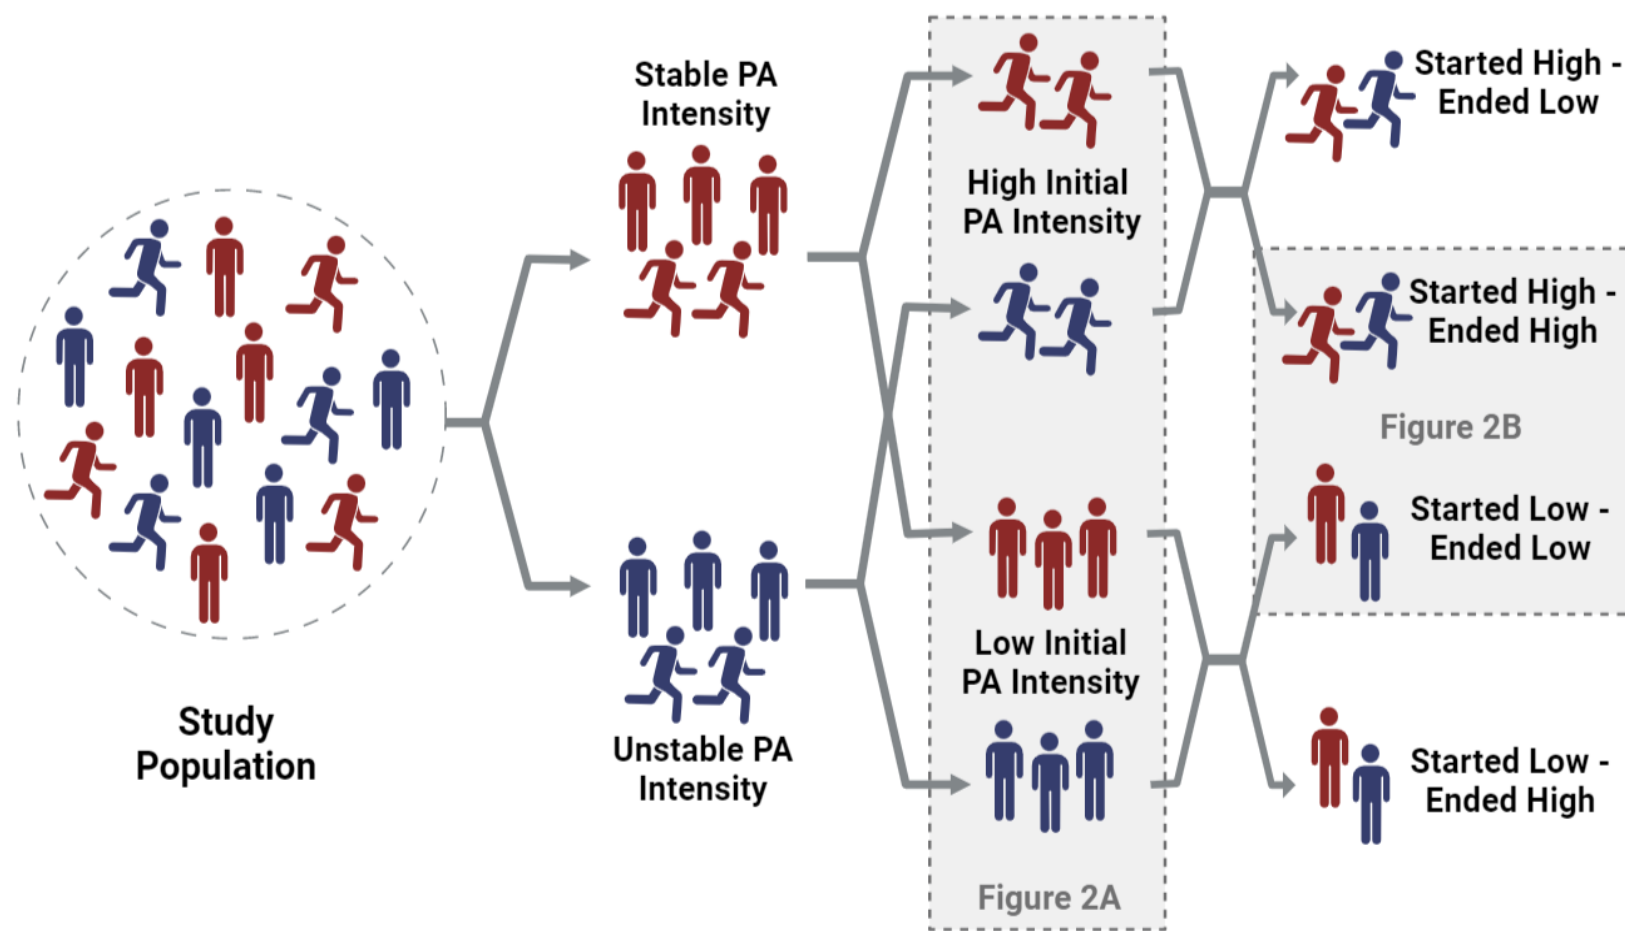

Improving outcomes by implementing variability-based algorithms for improving early and accurate diagnosis

Implementing variability-based algorithms for improving outcome

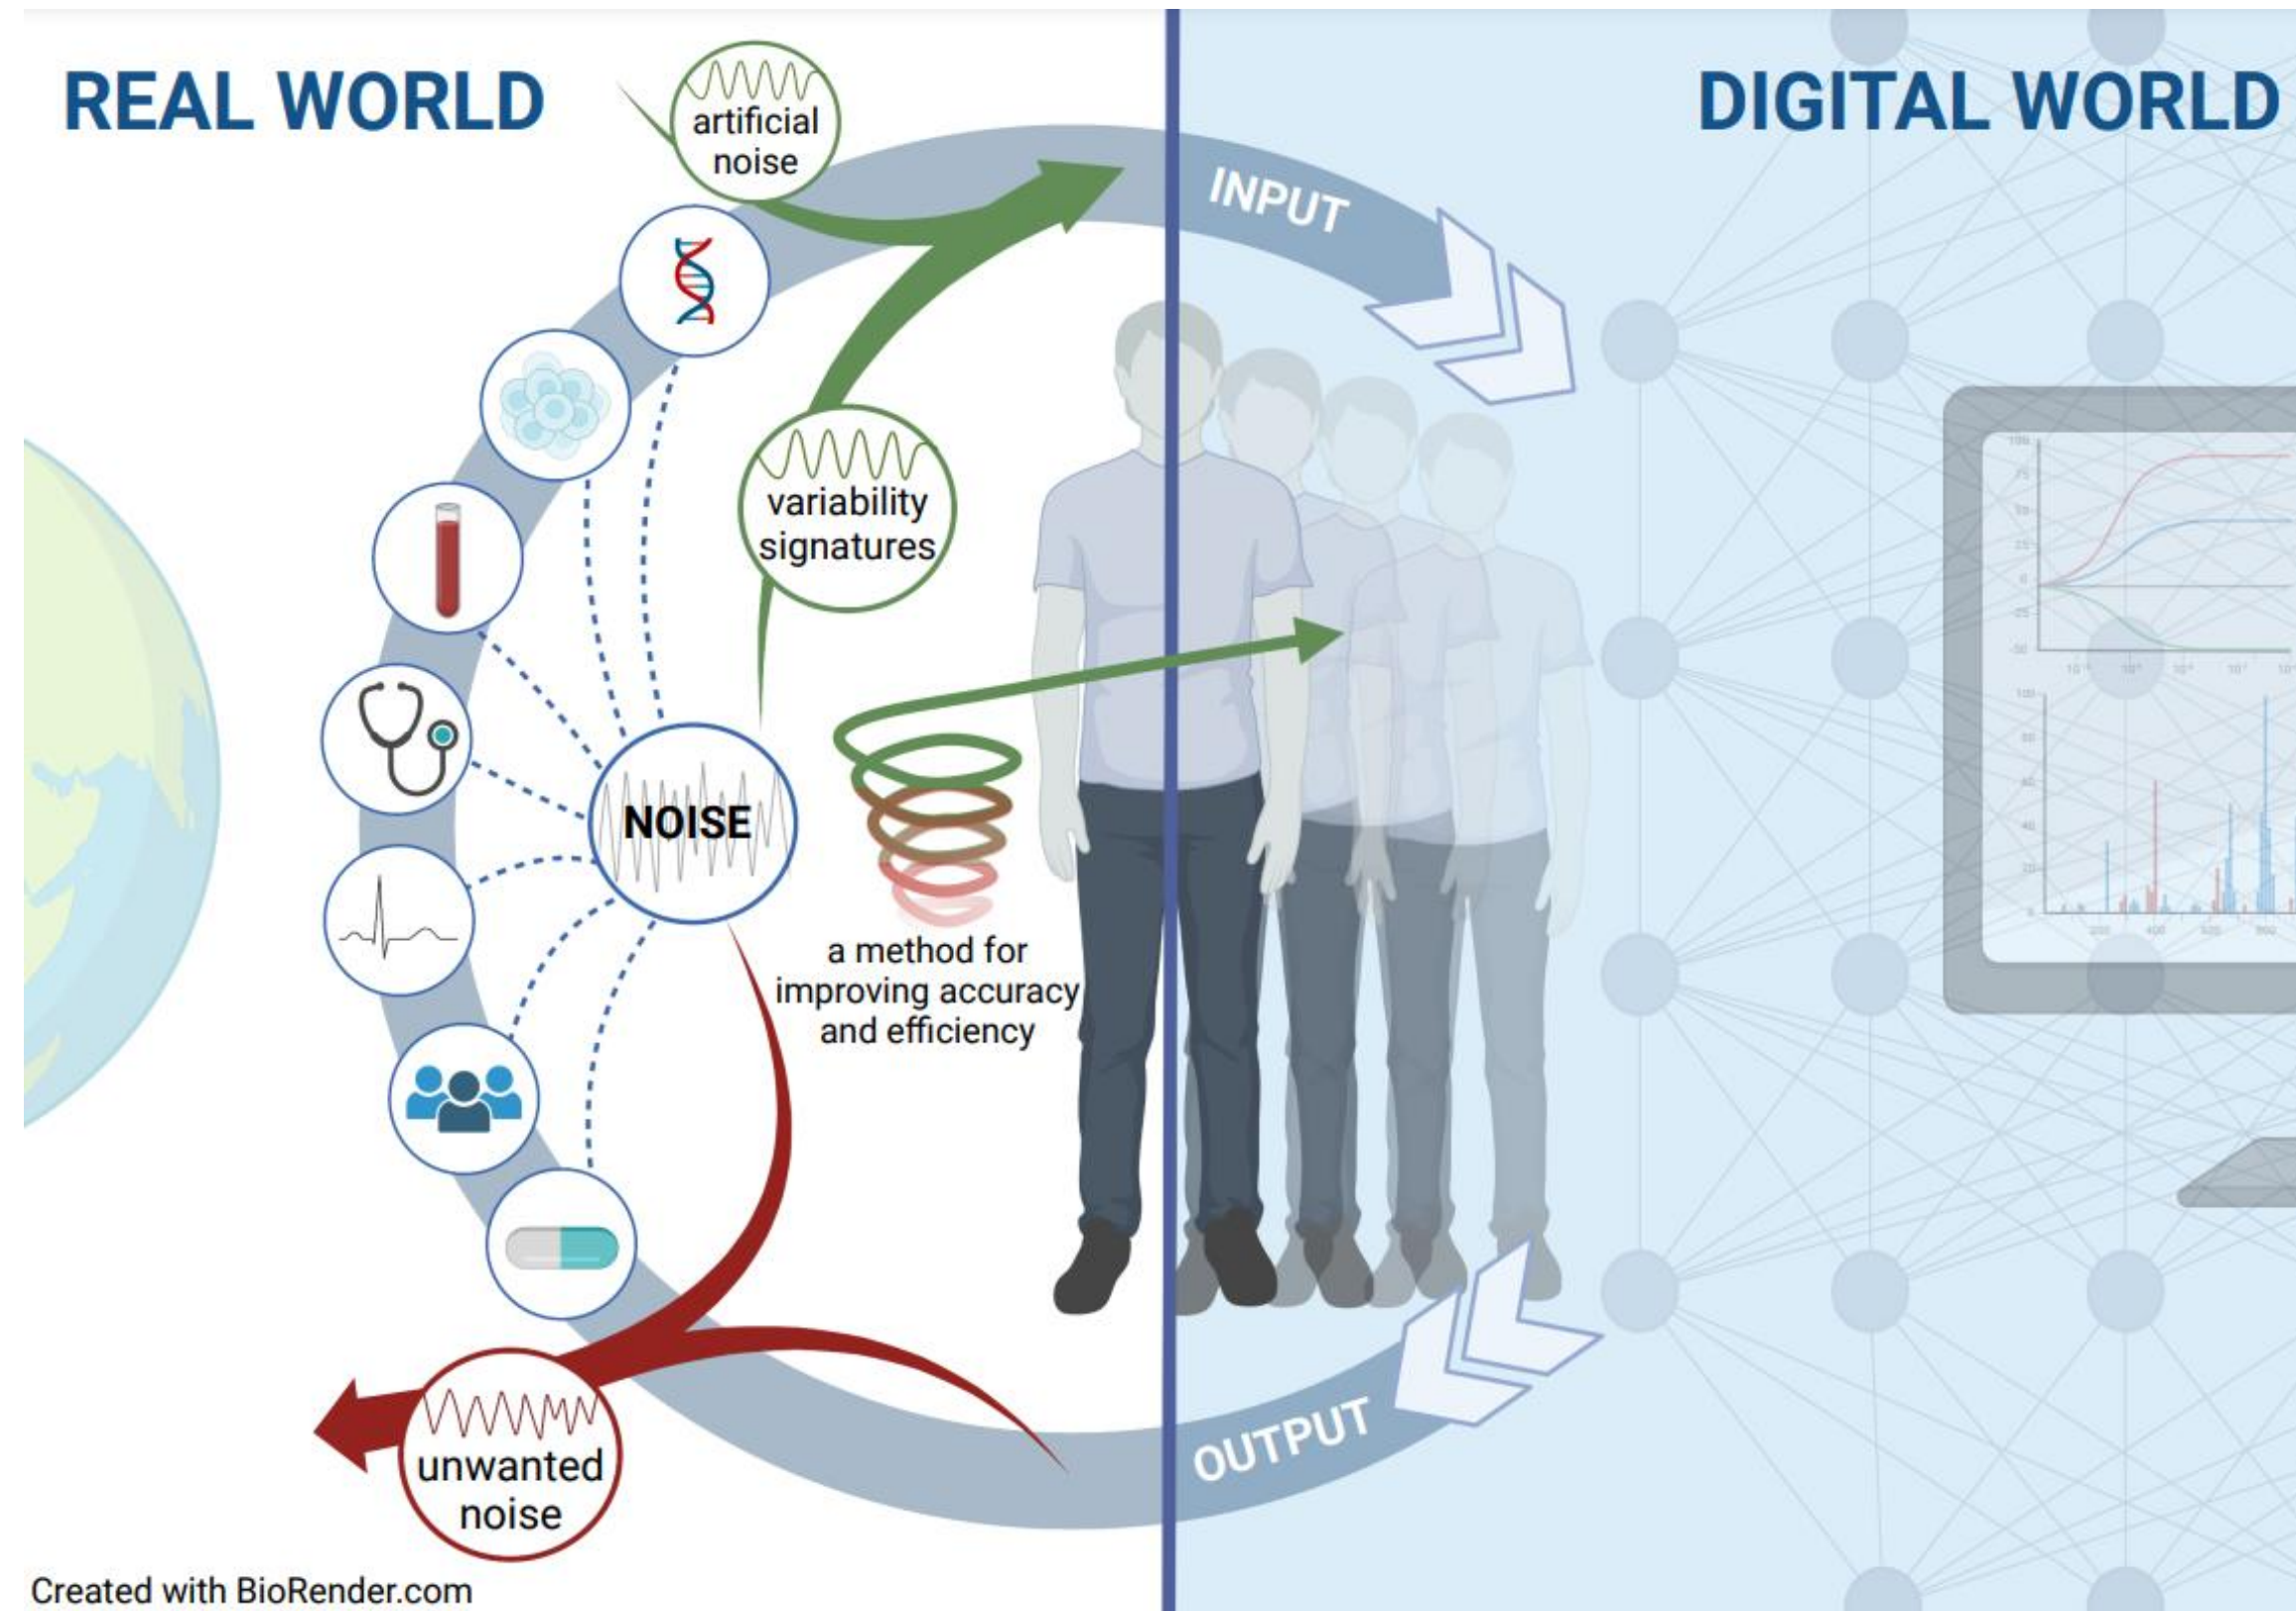

In the low physical activity intensity group: variability was associated with less physical disability and improved short-term memory.

SHARE dataset: The most prominent social science study
27 countries; millions of subjects being followed for 18 years

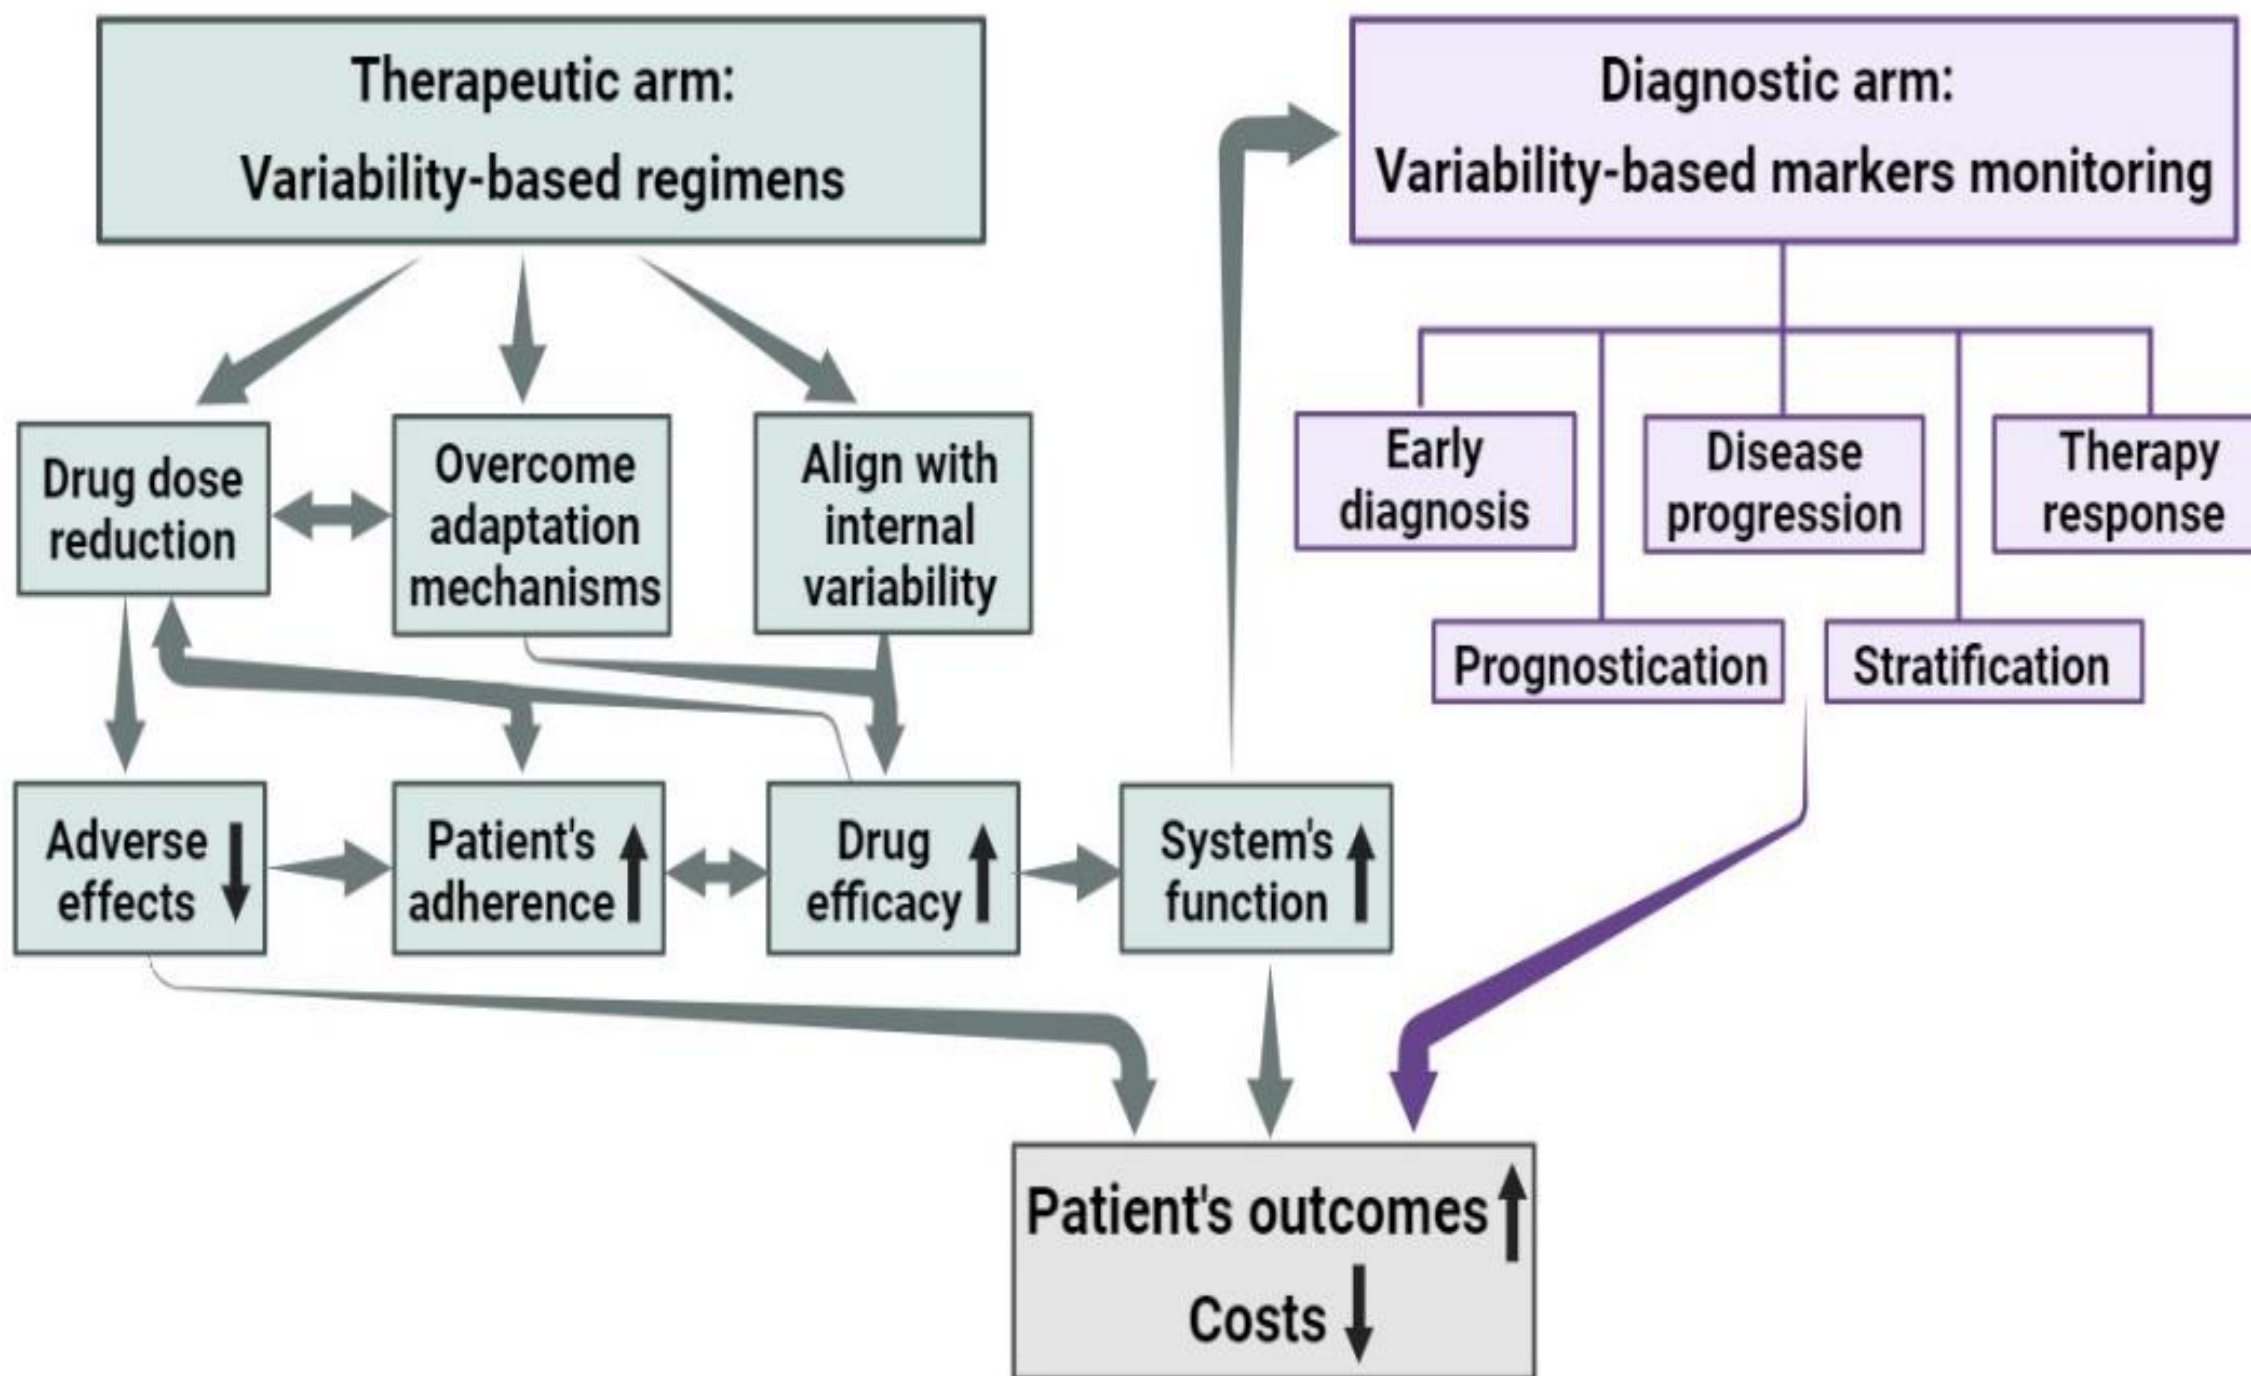

Variability-based digital twins

Improving the performance of prediction tools

The next-generation digital platform that improves diagnosis, monitoring, and effectiveness of drugs by implementing variability

The Constrained Disorder Principle: Patient-centered Holistic Approach

- Applies to any disease
- Gathers data on response
- Guides future treatments
- Remote monitoring

- ✓ Ensuring adoption by improving outcomes:
augmenting the standard of care
Patients view the app as part of their treatment.
- ✓ Improving existing products: An “Uber / Airbnb” model
No need to develop expensive new products, no regulatory barriers:
- ✓ Saving costs to health systems
- ✓ Increasing pharma revenue
- ✓ A B2B win-win business model
A per patient per month fee and sharing revenues from data
